sun / wind / glare / insect screen
for prams / strollers / buggies / joggers

fitting instructions

for the Outlook[®] shade-a-babe[™]

to fit the shade-a-babe[™]

unfold the shade and place on top of the fixed canopy / hood of the stroller - secure velcro around the handle bars of the stroller and cut the velcro to length if needed.

the curved cut design along the top of the shade allows for the use of the 'peek-a-boo' feature found on many stroller canopies / hoods.

the velcro pieces found along the sides of the shade can be secured in one of two ways: (1) wrap velcro pieces around the side bars of the stroller and secure them back onto the opposite velcro piece sewn on the shade or (2) join the velcro pieces around the back of the stroller and secure the velcro against the opposite velcro piece.

please cut any excess velcro and for safety discard the velcro offcuts.

to adjust the length of the shade-a-babe[™]

velcro is positioned on the bottom inside portion of the mesh - this can be used to shorten the length if needed.

fold the shade mesh under and secure with the velcro fastenings found on the inside of the shade.

to use the shade-a-babe[™] in the half shade position

to change the shade into the half shade position:

- (1) undo all the side velcro fastenings.
- (2) stand in front of the stroller and place your hands on the shade mesh under the drop down fabric.

tuck the mesh underneath itself to sit underneath the top portion of the shade but on top of the fixed canopy / hood of the stroller.

adjust the length as necessary and re-secure the top side velcro fastening as needed. the fastening position may differ in the half shade position to that of the full length position.

when the shade-a-babe[™] is used in the half shade position extra sun protection should be applied to the infant as the open areas may allow UV relective rays to enter the stroller.
